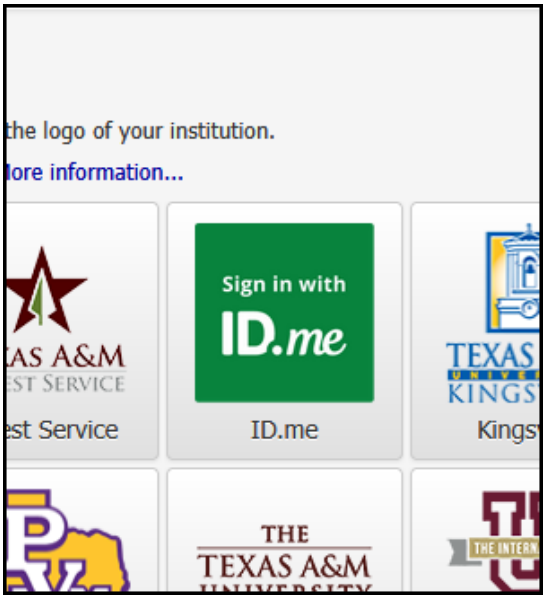
Logging Into SSO With ID.me

As a former employee of Texas A&M System Offices, you will no longer log into The Texas A&M University System Single Sign On (SSO) using your organization credentials. Instead, you will log into SSO using ID.me. Below are steps detailing instructions on how to log into SSO after termination so you may view and download documents from Workday.

1. One day AFTER your termination date, navigate to sso.tamus.edu and select the "ID.me" login button.

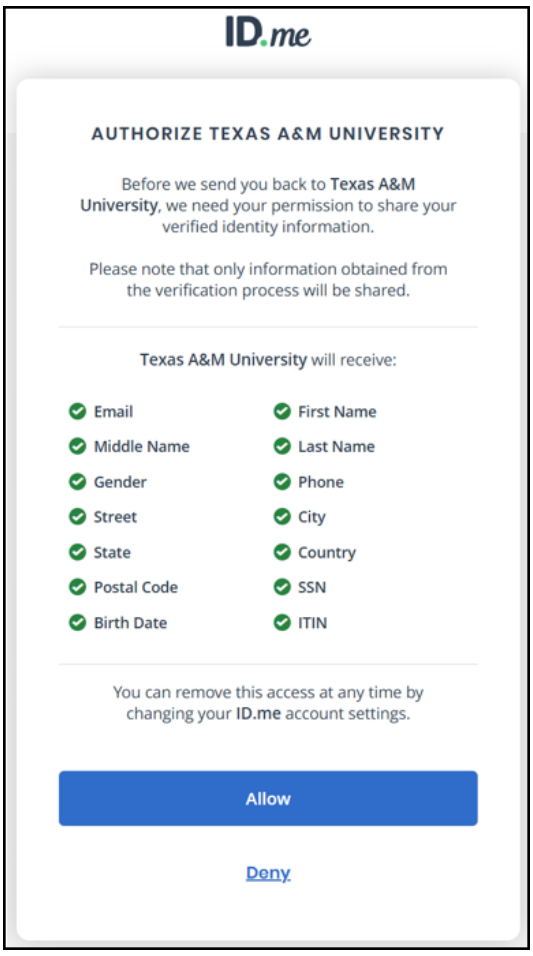


2. Create a new ID.me account or log into your existing ID.me account.
    a. If you already have an ID.me account, use your existing username and password to log in.

3. Make sure the following fields in your ID.me account exactly match the information you have already provided to Texas A&M System Offices.
    a. Full Legal Name
    b. SSN
    c. Date of Birth
    d. Gender

4. Complete all necessary requirements to obtain a "verified identity" including enabling two-factor authentication.

5. After logging into ID.me, you will authorize A&M System to access your verified identity information. **Do not select "Deny" - this will prevent you from logging in to SSO with your ID.me account.**



6. You should be automatically redirected to the A&M System SSO menu page.

If you experience issues during this process, follow the recommendations below:

- If you experience issues creating or updating your ID.me account, review the ID.me troubleshooting guide. Visit **I couldn't verify my identity** or **I can't sign in to my account** for help with completing verification. Or contact ID.me support.
- If you were able to create/update your ID.me account but are unable to log into A&M System SSO, please email support@tamus.edu and include "ID.me" in the subject line and include your full legal name and UIN in the email body.
